

Press release European Coatings Show 2023

SITA Messtechnik GmbH at the European Coatings Show in Nuremberg/Germany – Laboratory measuring devices for research, development and quality control.

Nuremberg/Dresden, 08 March 2023

The European Coatings Show is one of the largest gatherings of the coatings and paint industry in Germany. From 28 – 30 March SITA Messtechnik GmbH will be exhibiting for the first time and presents their innovative measuring devices and process solutions for research, development and quality control:

- Tensiometer for monitoring the surfactant concentration in process liquids and for optimising wetting characteristics of surfactant-containing liquids.
The **SITA DynoTester+** and **SITA pro line t15** measure the surface tension as well as the surfactant concentration fast and easy and warn in case of crossing upper and lower limit values.
- Mobile and inline measuring devices for pre-treatment control of parts surfaces before coating.
The **SITA CleanoSpector** and the **SITA SurfaSpector** are used to control the parts surfaces regarding cleanliness and wettability. Both devices measure selectively and precisely on functional surfaces of parts with various geometries directly at the process.
- Foam testing devices for analysing and determining foaming characteristics of surfactant containing liquids and the effects of anti-foaming additives.

Competent and individual consultation on site

Due to the versatile measuring devices and the comprehensive application experience, SITA Messtechnik GmbH is the optimal partner for R&D as well as QC in the laboratory regarding surfactant and surface control. **Visit us at the European Coatings Show in Nuremberg/Germany on booth 4-505 in hall 4** and experience our innovative devices live in practice.

As a special feature, visitors can bring their own parts and media samples. They are analysed directly with the easy to use measuring devices and the SITA experts give practical advice for suitable monitoring methods.

Press release European Coatings Show 2023

About SITA Messtechnik GmbH:

SITA Messtechnik GmbH develops, produces and sells devices for measuring the dynamic surface tension of liquids for controlling the surfactant concentration, fully automated foam tester for analysing the foaming behaviour of liquids, fluorescence measuring technique for controlling the cleanliness of parts and for monitoring the contamination level in process liquids as well as devices for testing the wettability by measuring the contact angle. The measuring devices are robust and very easy to operate with. They are used in research, development and manufacturing laboratories of the chemical industry for analysis and quality assurance tasks and in the field of surface technology/parts cleaning for monitoring and controlling processes.

Thank you very much in advance for sending a specimen copy or the corresponding link.
