

## **Press release 25 Years SITA Messtechnik GmbH**

### **25 years SITA Messtechnik GmbH – 25 years of Innovation for Quality and Economic Efficiency in Industrial Cleaning Processes**

Dresden, Germany – 03 November 2021

In December 2021, SITA Messtechnik GmbH from Dresden/Germany celebrates its 25th anniversary. The international operating company was founded in 1996 by Prof. Dr. Lothar Schulze, who developed with his team not only innovative technology for measuring the dynamic surface tension of liquids, but gradually established the company as market leader for measurement and control technology as well as for quality assurance in the parts cleaning industry by offering customized solutions for qualified process management.

Today 27 employees develop, produce and sell the products, which are used for cleanliness inspection of components and surfaces as well as for monitoring process media in cleaning processes. Customers of various industries such as the automobile industry, medical technology, electrical engineering and electronics, the chemical industry, machinery and plant engineering as well as the aerospace industry value the intuitive mobile measuring devices and the robust Inline measuring devices. The company operates in Germany and due to a large network of partners worldwide in over 64 countries.

With its solution and products SITA Messtechnik GmbH has a long-term and sustainable impact on the areas of industrial parts cleaning and surfactant analytics. The company is also an active member of FIT, the Association for Industrial Parts Cleaning and supports training and qualification in order to strengthen as well as technically and qualitatively drive the industry. The management and innovative development that was shaped for 25 years by the owner Prof. Dr. Lothar Schulze, is now continued by the Managing Director Juliane Schulze and the entire team of SITA Messtechnik GmbH.

Thus, the company is ready for future challenges. The objective is to strengthen and expand the worldwide position as a leading provider of measurement and control technology for quality assurance in industrial parts cleaning.

SITA Messtechnik GmbH develops, produces and sells devices for measuring the dynamic surface tension of liquids, fully automatic foam tester for analyzing the foaming behavior of liquids as well as fluorescence measuring technique for controlling the cleanliness of parts and for monitoring the contamination level in process liquids. The measuring devices are robust and very easy to operate with. Furthermore, they are used in research and development laboratories of the chemical industry for analysis and quality assurance tasks and in the field of surface technology for monitoring and controlling processes.
