

Press release

SITA at the parts2clean 2018 – Follow-up report

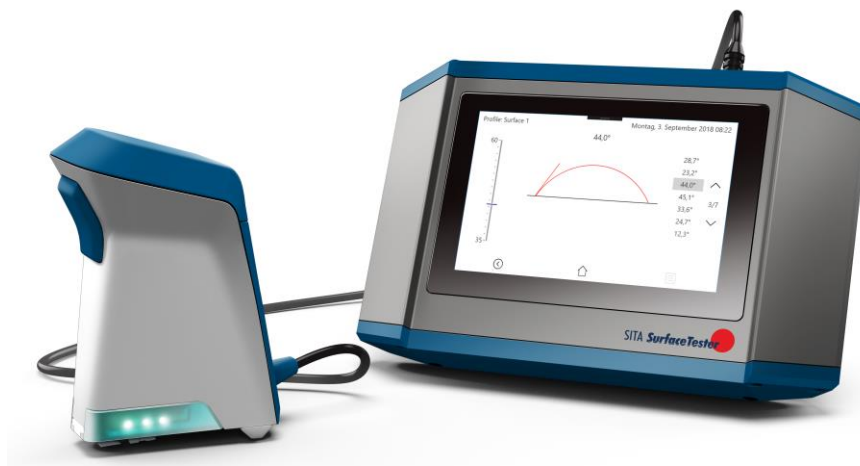

Dresden, 07 November 2018.

This year's **parts2clean** was again very successful for the SITA Messtechnik GmbH. From **23 – 25 October**, numerous customers and potential customers took the opportunity to get detailed information about the worldwide proven SITA products as well as innovations. Over the course of three exciting exhibition days, SITA experts answered technical and application specific questions and demonstrated the devices in use. Samples were measured directly.

The main focus of the SITA presentation was on the **SITA SurfaceTester**, a new hand-held measuring device for controlling the wettability by contact angle measurement.

Special characteristics of the device are:

- mobile use without PC, easy to use via touchscreen
- fast evaluation of the surface wettability directly at the process of parts manufacturing
- handy sensor head and the small contact area to support measuring at parts with various geometries

The **SITA SurfaceTester** completes the SITA product solutions „Concentration Measurement – Cleanliness Inspection – Contamination Monitoring“ by “Wetting control”. The presentation of our application specialist Tilo Zachmann at the innovation forum impressively showed application examples and advantages of the innovative measuring device.

The **SITA SurfaceTester** raised great interest among the visitors. The device is introduced into the market in spring 2019.

Press release

As international leading trade show for industrial parts and surface cleaning, the parts2clean has become an important event within the event calendar of SITA Messtechnik GmbH. In this year, we again were able to generate a significantly higher number of qualified customer contacts as well as engage in expert discussions with national and international audience. SITA is now more than ever an integral part of the industry as well as a competent partner supporting customers and potential customer with individual solutions for quality assurance and with process management for parts cleaning. SITA will exhibit again at the parts2clean 2019, from 22 – 24 October.

About SITA Messtechnik GmbH:

SITA Messtechnik GmbH develops, produces and sells devices for measuring the dynamic surface tension of liquids for controlling the surfactant concentration, fully automatic foam tester for analysing the foaming behaviour of liquids, fluorescence measuring technique for controlling the cleanliness of parts and for monitoring the contamination level in process liquids as well as devices for testing the wettability by measuring the contact angle. The measuring devices are robust and very easy to operate with. Furthermore, they are used in research and development laboratories of the chemical industry for analysis and quality assurance tasks and in the field of surface technology/parts cleaning for monitoring and controlling processes.
